DETAILED ACTION

1. This office action is in response to amendment filed on 6/2/2009.
2. Claims 4-5 and 14 have been amended.
3. Claim 15 has been cancelled.
4. The objections and rejections from the prior correspondence that are not restated herein are withdrawn.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

6. Claim 4 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.
7. Claim 4 recites, "transmitting a synchronization signal on **all** the data lanes if the achieved data transition density is less than the desired data transition density **only** on less than all of the data lanes." The specification does not provide adequate support showing the synchronization signal being transmitted on **all** the data lines **only** when less than all of the data lines have a transition density below the desired density.

Figures 4 and 5 and page 4 line 16-page 5, line 13 discuss NAND gates which asserted either a DoSync, DoSyncOB, or DoSyncIB signal when any data lane, including all data lanes, have a less than desired transition density in order to trigger synchronization signals. It does not describe the synchronization signals being transmitted on all of the data lanes and it does not indicate such a transmission only occurs when less than all of the data lanes have a lower transition density. The examiner encourages the applicant to indicate where explicit support for the claimed language is located if the applicant disagrees.

Allowable Subject Matter

8. Claims 1-3, 5-14, 25-26 are allowed.
9. The following is a statement of reasons for the indication of allowable subject matter:
 - a. Regarding claims 1-3, 5-14, 25-26, specifically independent claims 1, 5, and 14, the prior art of record does not teach of transmitting a synchronization signal on at least one data lane in response to determining a transition density for that at least one data lane in the context of the claimed invention.

Response to Arguments

10. Applicant's arguments, see page 8 line 16-page 9, line 21, filed 6/2/2009, with respect to independent claims 1, 5, and 14 have been fully considered and are persuasive. The corresponding rejection of the claims has been withdrawn.

Conclusion

11. A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
